

RESIDENTIAL MARKET REPORT

RENTAL REPORT JUNE 2022

REGIONAL RENTAL MARKET AFFORDABILITY

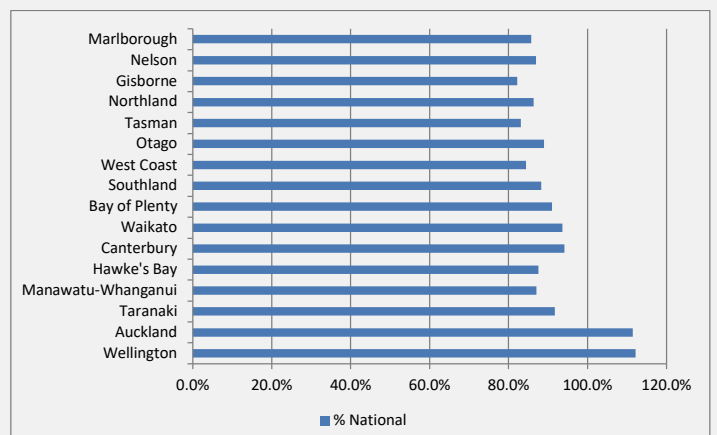

The map of New Zealand's sixteen regions shows regional rental affordability as a percentage of national affordability. Both national and regional affordability have been calculated by dividing the respective average weekly wages (March 2022) into the respective geometric mean rents (March 2022). In this quarter, there are seven regions including Northland (102.1%), Auckland (101.8%), Bay of Plenty (111.6%), Gisborne (106.5%), Hawke's Bay (115.1%), Tasman (117.7%) and Marlborough (108.3%) from the last quarter, that are less rent affordable than the national average which is set as 100%. The remaining nine regions are all relatively more rent affordable than the national average. In this quarter, there are two regions continue to stand out as being the most rent affordable. These were Southland (78.9%) and West Coast (75.6%).

Again, in this quarter wages in only two regions (i.e., Auckland and Wellington), continue to be above the national level, as shown below. Of the three regions, West Coast and Southland continue to have affordability below the national average, reflecting more favourable rental conditions in these regions relative to incomes.

Overall, in this quarter a slight improvement of 2.93% is observed at the national level as compared to the last quarter. There were ten regions showing some improvement and remaining six regions showing deterioration in rental affordability.

REGIONAL RENTALS

The rents over the quarter (December 2021 to March 2022) and year (March 2021 to March 2022), for the main urban areas, are set out in the table. Over the past quarter, rental changes were decreased in half of the (eight) regions (last quarter in two regions) and increased in the remaining eight regions with a net result of 0.8% decrease for the quarter.

Nationally, rents increased by 7.5% over the year, and this is reflected across all sixteen regions. The largest annual rent increases in double digit were recorded in eight regions including West Coast (30.7%) and Tasman (22.4%).

DATA SOURCES

This publication has been developed from private sector rental data supplied by the Ministry of Business Innovation and Employment (Bond Centre). Information on wage rates, demographics and the structure of the rental housing stock is drawn from Statistics NZ data. House price information has been extracted from Real Estate Institute New Zealand (REINZ) and Quotable Value (QV) NZ statistics.

TERMINOLOGY

Geometric mean rents are used in this publication as a better measure of rental trends than median and average rents because rents at the top end of the market are down weighted. For example, take three numbers 2,3, and 6.

The average is 3.66, the median is 3 and the geometric mean is 3.3. To calculate the geometric mean multiply the three numbers together and then calculate the cubed root.
