A COMPARISON OF THE NUTRITIVE VALUE
OF NORMAL AND OPAQUE-2 MAIZE FOR GROWING PIGS
IN DIETS CONTAINING MEAT AND BONE MEAL WITH AND
WITHOUT AMINO ACID SUPPLEMENTATION

A thesis
presented in partial fulfilment of the
requirements for the degree

of

Master of Agricultural Science in

Animal Science

at

Massey University

by

Nigel Harry John Stables

1974.

ACKNOWLEDGEMENTS

It is with sincere appreciation that I acknowledge the guidance and counsel of Mr J.R. Carr, supervisor of the investigation presented. His ready assistance has made this an interesting and challenging assignment.

For willing co-operation in the search for information, I extend thanks to Miss M.G. Campbell and the other staff at the Massey University Library.

To Professor R.J. Townsley I wish to express my gratitude for many hours of discussion and guidance in the planning and statistical analysis of the experiments.

I would like to acknowledge the help and co-operation of the Massey University Poultry Research Centre during the study of techniques for the analysis of tryptophan and also to the staff of the Massey University Pig Research Centre for their co-operation.

Financial assistance from the New Zealand Pork Industry Council during the course of these studies is also acknowledged with gratitude.

I would also like to thank Mrs B. Brown for typing the manuscript.

	PAGE
ACKNOWLEDGEMENTS.....	i
TABLE OF CONTENTS.....	ii
LIST OF TABLES.....	iv
LIST OF FIGURES.....	viii
 CHAPTER	
1 AN INTRODUCTION.....	1.
2 THE PROTEIN AND AMINO ACID NUTRITION OF THE GROWING PIG.....	4.
2.1 Introduction.....	4.
2.2 Protein as a Dietary Constituent.....	5.
2.3 Problems in Assessing the Protein and Amino Acid Needs of the Growing Pig....	8.
2.4 Conclusions.....	47.
3 PROTEIN NUTRITION IN RELATION TO CERTAIN FEEDSTUFFS, RATION FORMULATION AND NITROGEN BALANCE STUDIES.....	51.
3.1 Maize as a Major Ingredient in Rations for Growing Pigs.....	51.
3.2 Meat and Bone Meal as a Protein Supplement in Rations for Growing Pigs.	57.
3.3 Ration Formulation with Particular Reference to Amino Acid Nutrition.....	60.
3.4 The Use of the Nitrogen Balance Trial With Growing Pigs.....	77.
4 MATERIALS AND METHODS.....	85.
4.1 Experiment I: The Growth Trial.....	85.
4.2 Experiment II: The Nitrogen Balance Trial	98.

CHAPTER		PAGE
5	RESULTS AND DISCUSSION.....	104.
5.1	Experiment I: The Growth Trial.....	104.
5.2	Experiment II: The Nitrogen Balance Trial.....	127.
5.3	Some Comparisons Between the Results of Experiments I and II.....	139.
6	SUMMARY AND CONCLUSIONS.....	145.

	PUBLIOGRAPHY.....	173.

LIST OF TABLES

TABLE		PAGE
2.2.1	Dietary Amino Acids Characterised for the Growing Pig.....	7.
2.3.1.1	The Effect of Protein Level and Quality on Pig Performance over the Range 18-68 kg Live Weight.....	9.
2.3.1.2	Dietary Amino Acid Balance of Diets Used By Kropf <u>et al.</u> (1959).....	10.
2.3.3.1	Some Changes in the Nutrient Composition of a Barley-Based Diet as the Proportion of Meat and Bone Meal is Increased.....	17.
2.4.1	Amino Acid Requirement (g/mcal digestible energy) of the growing pig with restricted Feeding. Adapted from Rerat and Lougnon (1968).....	49.
3.1.1.1	Relative Amounts of Protein Fractions in a Normal Hybrid and an Opaque-2 Maize Sample	55.
3.1.1.2	Amino Acid Content in the Defatted Endosperm of Illinois High Protein, and Opaque-2 Stock, and an op-2 Recovery for the Cross (IHP x Op-2)xIHP.....	56.
4.1.2.1.1	A partial Proximate Analysis of the Maize and Meat and Bone Meal used In Experiments I and II.....	86.
4.1.2.4.1	Gross Composition of the Diets used in Experiments I and II.....	90.
4.1.2.4.2	Calculated Amino Acid Contents of the Experimental Diets (% Dry Matter).....	91.
4.1.2.4.3	Calculated Amino Acid Contents of the Experimental Diets (g/mcal Apparent Digestible Energy).....	91.
4.1.3.1	Analysis of Variance Table for 8 and 16 Treatments with 64 Observations.....	92.
4.1.5.2.1	Daily Feed Allowance According to Live Weight for the Pre-Experimental and Experimental Periods for Experiments I and II.....	96.
5.1.2.1	Individual and Treatment Refusal Totals for Experiment I.....	106.
5.1.3.1	Significant Mean Squares for the Partitioned Treatment Sums of Squares for Average Daily Gain.....	110.

TABLE	PAGE
5.1.3.2	Significant Interaction of Maize Type by Tryptophan on Average Daily Gain..... 111.
5.1.3.3	Growth Response of Rats and Pigs to Lysine and Tryptophan Supplementation of Maize Diets Containing no other Protein Source.. 114.
5.1.3.4	Significant Interaction of Lysine by Tryptophan on Average Daily Gain..... 116.
5.1.3.5	Significant Interaction of Maize Type, Lysine by Tryptophan on Average Daily Gain..... 117.
5.1.3.6	Significant Interaction of Maize Type, Methionine by Tryptophan on Average Daily Gain..... 119.
5.1.3.7	Ranked Individual Treatment Means for Average Daily Gain in Experiment I..... 120.
5.1.4.1	Significant Mean Squares Resulting from the Partitioning of the Treatment Sums of Squares for Feed Conversion Ratio..... 122.
5.1.4.2	Significant Interaction of Maize Type by Tryptophan on Feed Conversion Ratio..... 123.
5.1.4.3	Significant Interaction of Lysine by Tryptophan on Feed Conversion Ratio..... 124.
5.1.4.4	Ranked Treatment Means for Feed Conversion Ratio in Experiment I..... 125.
5.2.3.1	Balance and General Mean Values for Live Weight, Gross Energy Intake, Apparent Digestibility of Dry Matter and Energy, and Metabolizable Energy for Experiment II. 129.
5.2.4.1	Mean Values Within Balances for Nitrogen Balance Information in Experiment II..... 131.
5.2.4.2	Treatment and Balance Means for Nitrogen Retention with Standard Errors for a Split-Plot Experiment with Missing Data.... 135.
5.2.4.3	Ranked Treatment Means for Nitrogen Retention over Both Balance Periods..... 137.
5.2.4.4	Ranked Treatment Means for Nitrogen Retention..... 139.

APPENDIX TABLES

TABLE		PAGE
A1.1	Maize Grain Production in New Zealand.....	150.
A3.1a	Published Values for the Crude Protein and Essential Amino Acid Contents of Normal Hybrid Maize, Along with Respective Data for the Samples Used in Experiments I and II.....	151.
A3.1b	Published Values for the Crude Protein and Essential Amino Acid Contents of Opaque-2 Maize, along with Respective Data for the Sample Used in Experiment I and II.....	152.
A3.2	Published Values for the Crude Protein and Essential Amino Acid Content of Meat and Bone Meal, Along with Respective Data for the Sample used in Experiments I and II.....	153.
A4.1a	Gross Composition in Preliminary Trial A....	154.
A4.1b	Summary of Results for Preliminary Trial A..	154.
A4.2	Gross Dietary Composition and Summary of Results for Preliminary Trial B.....	155.
A4.3	Stated Contribution of Minerals and Vitamins to the Diet used in Experiments I and II by the Proprietary Supplement Incorporated, along with Respective Recommendations.....	156.
A4.4	Daily Feed Allowances According to Live Weight for Preliminary Trials A and B.....	157.
A4.5	Total Amino Acid Analysis for the Maize and Meat and Bone Meal Samples used in Experiments I and II.....	158.
A4.6	Derivation of Standard Curves and Results of Tryptophan Analyses of the Dietary Ingredients used in Experiments I and II..	159.
A4.7	Gross Composition of the Pre-experimental Diet and the Estimated Content of Selected Nutrients.....	160.
A5.1	Live Weights According to Week on Treatment and Average Daily Gains for Each Pig in Experiment I.....	161.

TABLE	PAGE
A5.2	Refusals of Diets by Pigs in Experiment I According to Week (Approximate) on Treatment..... 163.
A5.3	Feed Allowances, Feed Refusals and Feed Conversion Ratios for Each Pig in Experiment I..... 164.
A5.4	Summary of Results for Experiment II..... 166.
A5.5	Nitrogen Content of Diets used in Experiment II..... 168.
A5.6	Gross Energy Content of Some of the Diets used in Experiment I..... 168.
A5.7	Total Feed Refusals Recorded in Experiments I and II for Pigs Fed Diets 9 and 11 According to Live Weight..... 168.
A5.8	Experiment I: Summary of Analysis of Variance of Average Daily Gains and Feed Conversion Ratios..... 169.
A5.9	Experiment II: Summary of Analyses of Variance..... 170.
A5.10	Live Weights According to Week on Treatment and Average Daily Gains for Each Pig in Experiment II with Corresponding Data for Pigs of Experiment I Fed the Same Diets.... 171.
A5.11	Average Daily Gains from Experiment I and Nitrogen Retentions from Experiment II for Those Animals Fed Group II of the Experimental Diets, with Regression Equations Including These Results..... 172.

LIST OF FIGURES

FIGURES		PAGE
2.3.7.1	Effect of Plane of Nutrition on Daily Carcass Lean Gain.....	32.
2.3.7.2	Effect of Plane of Nutrition on Efficiency of Conversion of Dietary Protein to Lean Meat.....	33.
2.3.10.1	Effects of Amount of Protein Ingested on its use.....	44.
2.3.10.2	The Optimal Concentration of Lysine in Dietary Crude Protein.....	46.
3.3.3.1	Example of a Complementary Effect with Two Protein Sources.....	71.
4.1.4.1	Internal View of the Testing Facility used for Experiment I.....	93.
4.1.5.3.1	Final Layout of the Test House for Experiment I.....	97.
4.2.4.1	A View of Some of the Metabolism Cages used in Experiment II.....	100.
5.3.2.1	Regression of ADG (Experiment I) on Nitrogen Retention (Experiment II) for Balance A and Balance B, with Treatments 9 and 11 Excluded.....	144.
