**Anxiety as a Factor in Student Pilot
Performance
In a University Aviation Degree Programme**

A thesis presented in partial fulfilment
of the requirements for the degree of
Master of Aviation
at Massey University

Ritchie James de Montalk

2000

Abstract

Student Pilots in a University Aviation Degree Programme are required to perform not only academically, but also in the mastery of practical skills associated with the flying and operation of light aircraft and flight simulators.

Flight training is a dynamic process during which the student pilot is subject to many pressures both physiological and psychological, many of which may be outside his or her immediate control. Considerations such as the expensive nature of flying training, weather constraints, workload, peer pressure, and an on-going requirement to achieve practicum and academic goals in an environment of continual examination, assessment, and testing, place a burden on the student pilot that is not encountered in the traditional university programmes. Considerable research has been done on anxiety in high school and tertiary educational settings but there is a lack of information about its application to aviation, particularly where the practical assessment and flight testing of student pilots are concerned.

This study examines the effects of anxiety on student pilot performance during flight training and flight-testing. To achieve this, questionnaires were developed from existing state and trait anxiety questionnaires and adapted for use in the aviation environment. This enabled the student's state and trait anxiety levels to be measured at different stages of their flight training and during flight-testing and helped identify specific areas of concern and anxiety causing factors. The results of the research confirmed that trait and state anxiety can be measured in student pilots and that test anxiety was also detectable. While no measurable effects of anxiety on hours to first solo or flight test scores results were obtained some evidence of the validity of the interactional model of anxiety was detected.

Acknowledgements

I would like to thank my supervisor, Dr L.M. Hunt for her advice, encouragement, and support during this study.

I also wish to record my appreciation for the assistance of the flying instructors and student pilots of the Massey University Milson and Ardmore flight centres whose willing co-operation made this study possible.

List of tables and Diagrams	iv
List of Appendices	ix
Chapter One: Introduction	
1.1 Background.....	1
1.2 The Learning Environment.....	3
1.3 The Flying Training Syllabus.....	6
1.4 The Organisation of the Thesis.....	10
Chapter Two: Literature Review	
2.1 Aviation Literature.....	11
2.1.1 Learning to Fly.....	14
2.1.2 Identifying the Fundamental Flying Skills.....	16
2.1.3 The effect of stress on fundamental flying skills.....	17
2.2. Defining the terms.....	20
2.2.1 Stress.....	20
2.2.2 Anxiety and fear.....	36
2.2.3 Test Anxiety.....	49
2.2.4 The Interactional Model of Anxiety.....	52
2.2.5 Defining the research Problem.....	54
Chapter Three: Methodology	
3.0 Subjects.....	58
3.1 Characteristics of Sample.....	59
3.1.1 Gender.....	59
3.1.2 Age.....	59
3.1.3 Language.....	60
3.2 Test Instruments.....	60
3.2.1 The Measurement of Trait Anxiety.....	61
3.2.2 The Measurement of State Anxiety.....	63

3.2.3	Classification of Anxiety Inducing Factors.....	64
3.2.3.1	The WINV Questionnaire.....	64
3.2.3.2	The Anxiety Situation Questionnaire.....	68
3.2.3.3	Identifying Worry and Emotionality Components.....	74
3.2.3.4	Developing an Interactional Aviation Model.....	75
3.3	Procedure.....	79
3.3.1	The A-TRAIT,WINV and Bio Data Questionnaires.....	79
3.3.2	The State Anxiety Questionnaires and ASQ.....	80
3.3.3	Random Administration of A-STATE Forms.....	82

Chapter Four: Results

4.0	Data Analysis.....	83
4.1	The relationship between Student Pilot Trait and State Anxiety and Student performance.....	84
4.1.1	Descriptive Statistics.....	84
4.1.2	The Relationship between Performance and Anxiety.....	84
4.1.3	The Relationship between Gender and Anxiety.....	87
4.1.4	The Relationship between Language and Anxiety.....	87
4.2	The Relationship between Student Pilot pre and post- test State Anxiety and Evaluated and Non-Evaluated Dual Training Flights.....	88
4.3	Changes in the Worry and Emotionality Components of Test Anxiety as a result of undergoing a Flight Test.....	88
4.4	The Relationship between a Student's predisposition to Trait Anxiety and the State Anxiety experienced during Flight Training.....	90

Chapter Five: Discussion

5.0	Introduction.....	92
5.1	The Relationship between Trait and State Anxiety and Student Performance.....	92

5.2	The Relationship between Student Pilot Gender, Language and Anxiety.....	95
5.3	The Relationship Between Student Pilot pre and post-test State Anxiety Levels and Evaluated and Non-Evaluated Dual Training Flights.....	96
5.4	Changes in the Worry and Emotionality Components of test Anxiety when undergoing a Flight Test.....	97
5.5	Relationship between Trait Anxiety and State Anxiety levels during Flight Tests.....	98
5.6	Limitations of the Study.....	100
5.7	Conclusions and Recommendations.....	100
5.8	Areas for Future Research.....	102
